Mastery My Savings Error Log

Credit Name: CSE 2110 Procedural Programming 1
Assignment Name: Mastery My Savings

Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

<mark>Error</mark>

Since this code was similar to the other mastery projects (MySavings and DigitsExtractor) I ran into no major errors.

The only error I had in this code was misspelling the class name in the object I made in the LunchORder class. (I didn't initially have this error I think I just went through and accidentally typed in an "s")

```
Foods food = new Food();
```

This messed up all of my code related to the object.

```
nextInt(); // Store the number of soda's as int variable numSodas
"Sodas nutritional information (per item): " + food.NutritionalInfo(foodType));
ional information for soda's that you get from the Food object/class
```

As you can see this line for example wouldn't work because it relies on the object and since the class in the object line is spelt wrong its not getting any information resulting in an error (not the error happens before any of these lines, but rather in the object line itself)

This was the error message I got.

```
<terminated> LunchOrder [Java Application] C:\Users\hleet\.p2\pool\plugins\org.eclipse.justj.openjdk.hotspot.jre.
Exception in thread "main" java.lang.Error: Unresolved compilation problem:
        Foods cannot be resolved to a type

        at chapter7/LunchOrder.LunchOrder.main(LunchOrder.java:14)
```

To fix this I simply deleted the "s" on the Food class which fixed the problem with my object.

```
Food food = new Food();
```
